### DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

Lost Spring is located some 250-300 feet north of a county road two and one-half miles west of the town of Lost Springs. It is in a small grassy tract of land, which is fenced off from the adjoining fields. The spring comes bubbling out at the head of a small ravine and flows westward some 20 feet into the headwaters of Lyon creek, which flows in a northerly direction. Scattered scrub trees now dot the immediate area where the spring is located; no trees would have been found there in the early days of the Santa Fe trail travel. Water cress originally planted in the 1840's still grows at the spring and along the water course to the creek.

The Santa Fe trail was to the south of the spring, south of the present road. No visible evidence of the trail remains in the immediate vicinity. The location of the stage station in the field across the road is identifiable only by occasional relics discovered during farming operations.

Some 30 to 40 years ago the site was a popular picnic ground, but very little usage of the fenced-off area is made at the present time. There is no evidence of any activity occurring which would harm the spring. Although some of its surroundings have changed, in all likelihood the spring differs very little in appearance from that of the last century.

BUILDER/ARCHITECT

## STATEMENT OF SIGNIFICANCE

From the 1820's to the 1870's one of the most significant land routes in the United States was the Santa Fe trail, which had two-thirds of its length in Kansas. William Becknell's first successful trade ventures to Santa Fe in 1821 and 1822 opened the way for other entrepreneurs. So many became involved in the Santa Fe trade by 1825 that the federal government began to survey and mark the trail. The location of water sources helped to determine the route.

Lost Spring was one of the favorite camping spots on the Santa Fe trail because it generally had an ample supply of good water. It was located 15 miles west of Diamond Spring, a day's travel for a wagon train.

Long before it was known to travelers on the Santa Fe trail, Lost Spring was used by the Indians and early explorers, traders, etc. The Kansa Indians are said to have called it "Nee-nee-oke-pi-yah," and the Spaniards named it "Aqua Perdida." Both phrases mean "lost water."

The spring apparently got its name because it is a periodic spring, drying up at times for a week, a month or even two years, so those visiting the site sometimes could not locate the spring on a return trip. Geologists say the water has its origin in the Rockies and that it follows a fault line. A cave-in somewhere will block the water, and pressure then mounts, forcing the water around or through the blockage.

The U. S. Surveying Expedition of 1825-1827 marked a route which ran several miles south of the spring, and the spring was not included in engineer Joseph Brown's field notes or maps. However, most wagon trains evidently followed the high ground between two drainage systems a couple miles to the north of the marked trail; by doing so they could avoid crossing a number of small creeks. That route brought them near the spring.

The spring was described by a diarist during an 1828 journey on the trail as "water bubbling through white sands at the head of a prairie ravine." Lost Spring is identified in most of the tables of distances printed and distributed for Santa Fe travelers after the mid-1830's. It was well-known to travelers in the 1840's and was one of the watering spots where the U. S. government authorized planting strawberries and water cress. It was hoped that by eating them the soldiers would prevent scurvy. The last strawberries at Lost Spring were picked around 1950, but the water cress still grows in abundance at the site.

Josiah Gregg mentioned Lost Spring in his Commerce of the Prairies published in 1844 but it was not named in the report of his first (1831) crossing of the prairie. William Richardson, a member of the 1846 Doniphan Expedition, in his journal wrote: "The stream rushes suddenly out of the ground and after rushing over the sand a few yards, as suddenly sinks and is seen no more."

A stage station was set up nearby in 1859 and was known as the Lost Springs Station. It served as a tavern, hotel, post office and stage stop. No visible evidence remains of the station; the site is in a tilled field.

Lost Spring

CONTINUATION SHEET 1

ITEM NUMBER 8, 9 PAGE 1

8.

Since 1908 the land where the spring is located has been in the possession of the Shields family, which has displayed a high regard for its historical importance. The place was a popular local picnic and gathering spot between 1910 and the 1930's.

The spring's appearance has not been compromised; it has retained its integrity. Lost Spring was a well-known landmark of the Santa Fe trail, a popular camping site and the source of good water.
